

Upgrading your Security Systems?

Seven things you should know before you start upgrading your CCTV or Access Control, Intruder Security systems

1. It's important to clearly understand where you are today! Understand what you have in place and where your problems are or have been gain a understanding of your potential future growth.
2. Choose a Technology Partner that has Vision and has a track record with reference sites already in place – long term partnerships produce best results and should be your goal.
3. Ask to speak and meet your peer's get some feedback and input listen to their positive and negative experiences see if you can leverage this knowledge.
4. Think Integration modern Digital systems are scalable can integrate to other systems-CCTV, BMS, Intruder, Fire – integration!
5. Compare like for like as far as systems being proposed -clearly understanding the different value propositions i.e. digital versus analogue in the case of CCTV
6. Don't concentrate on just at one component such as cameras look for open systems that offer you maximum choice and flexibility now and in the future.
7. All decisions should be strategic rather than just tactical - look at the medium to long term for your return on investment
